

Dear all

In this week's digest:

- A funded PhD is available at QUT studying the relationship between vegetation, bushfires and buildings. You'd be using drones and 3D models, and working in a team to create highly impactful outcomes. Please contact Grant Hamilton g.hamilton@qut.edu.au for details.
- Another PhD opportunity is available for a collaborative project between Auckland Bioengineering Institute and DairyNZ and will involve working with and improving the existing cow model, Molly. Molly is a key component in the DairyNZ toolbox used to design sustainable dairy systems for the future. It means that the suitable candidate will have excellent employment opportunities in NZ as post-doc scientist after the PhD.
