

Dear all

In this week's digest:

- UNSW Sydney has two postdoc opportunities available in the Climate Change Research Centre. Applications close 29 June.
 - One position focuses on improving the simulation of climate hazards by regional climate models, how we make regional climate projections, and how we make the results more useful to stakeholders. <https://external-careers.jobs.unsw.edu.au/cw/en/job/509313/postdoctoral-research-associate-climate>
 - The other position focuses on improving our understanding of how year-to year variability in the tropical Pacific and Indian oceans influences Australia's weather and how projections under greenhouse warming in those ocean basins will affect our future climate <https://external-careers.jobs.unsw.edu.au/cw/en/job/509314/postdoctoral-research-associate-climate>

If you would like something included in this digest, please email it to office@mssanz.org.au

Kind regards, Karen
